**INSECTS OF THE GALÁPAGOS ISLANDS<sup>1</sup>**

**INTRODUCTION**

When Charles Darwin visited the Galápagos Islands in September and October of 1835, he was impressed with the small size and dull colors of the insects he encountered, and of the insect fauna in general he commented that "excepting Tierra del Fuego, I never saw . . . so poor a country." G. R. Waterhouse, upon examining the insects which Darwin collected, reported that there was nothing in their appearance which would have led him to imagine that they had come from under the equator. Darwin described them as having a desert character, along with the plants and the birds.

Few entomologists who have visited the Archipelago would disagree with the generalization that the insect fauna is more desert than tropical in aspect, a fact in keeping with the arid nature of the islands, but tropical species are present, especially, but by no means exclusively, in the mangrove swamps along the shores and in the moist forests of middle elevations of the larger islands. The fauna is depauperate, as would be expected of oceanic islands populated by chance. For example, the continental British Isles have currently known more than three times as many families, ten times as many genera and thirty-two times as many species of insects as the Galápagos (table I). Although this differential will no doubt be reduced as the Galápagos fauna becomes better known, there is no reason to believe that it will ever be eliminated. However, although the fauna is poor in taxonomic entities, in favorable seasons it is rich in individuals, and the entomologists of the Galápagos International Expedition of 1964 brought back thousands of specimens.

In connection with our own studies we attempted to assemble as much as possible of the literature relevant to Galápagos insects prior to the Expedition, and to organize it in a systematic manner upon our return. The result gave us,

hopefully, a fairly complete list of the insects which have been reported from the Islands and a partially annotated bibliography of Galápagos entomology. We have been encouraged by entomologists interested in the Galápagos to publish this material, even though we realize that it is incomplete and has some obvious deficiencies. Among the latter are the fact that we have passed no independent taxonomic judgment on the validity of published records and unless we were aware of subsequent revisions, or unless the specialists who have so kindly examined our list have independently evaluated the references, with few exceptions they appear in the form in which they were treated in the most recent Galápagos publication. Nevertheless, we hope that our provisional faunal list

and provisional bibliography will be useful, and it is in this spirit that we offer it, whatever its shortcomings.

#### ACKNOWLEDGMENTS

This bibliography was prompted by the authors' participation in the Galápagos International Scientific Project, supported in part by Grant GE-2370 from the National Science Foundation and in part by the following: Belvedere Scientific Fund; California Academy of Sciences; California Maritime Academy; Charles Darwin Foundation; Government of Ecuador; Pacific Science Board, National Academy of Sciences; Shell Oil Company; the United States Army, Navy, and Air Force; the University of California Extension Division; and the Associates in Tropical Biogeography, University of California. Many specialists have reviewed sections and made valuable corrections and additions. Acknowledgment is made of this kind assistance in the introductory remarks under each order.

#### A BRIEF HISTORY OF ENTOMOLOGICAL EXPLORATION IN THE GALÁPAGOS ISLANDS

Charles Darwin collected the first specimens of insects in the Galápagos Islands for scientific purposes. A surprising number of others have followed him in the 130 years since the *Beagle*'s visit in 1835. We realize that the following list is incomplete, but it is offered mainly as an aid in locating collections of Galápagos insects and in finding detailed accounts of entomological work, islands visited, collecting, dates, field notes, etc. In some cases the information

presented was difficult to find, and we hope that the list may save others unnecessary searching of the literature.

The general pattern of presentation is: first a list of individual collectors, in chronological order, followed by a list of expeditions, also in chronological order. In each case, where known, the name of the collector (or expedition and vessel) is given; then the dates and islands visited. Usually the place of publication of entomological results is indicated by reference to the bibliography or by mention of the most important journal articles or book. The best general account for each expedition is also cited, as is the current location of Galápagos collections. The information presented is as complete as we could make it up to the time of the Galápagos International Scientific Project (January, 1964).

#### INDIVIDUAL COLLECTORS

HABEL, SIMEON—July 22, 1868 to January 1, 1869. New York. Hood, Floreana, Santa Cruz, Isabela, Bindloe, and Abingdon islands. *General Account*: Habel, in Salvin, O. 1876. On the Avifauna of the Galápagos Archipelago. *Trans. Zool. Soc. London*, vol. 9, pp. 447–510.

BAUR, GEORGE—June 9–September 6, 1891. Clark University, Worcester, Connecticut. Albemarle, Bindloe, Barrington, Charles, Chatham, Duncan, Hood, Indefatigable, James, Jervis, and Tower islands. Collected a dragonfly nymph reported by Asahina 1961, p. 1. *General Account*: 1892. Ein Besuch der Galápagos Inseln. *Biologisches Centralblatt*, vol. 12, pp. 221–250.

GERSCH, KARL—February–April, 1932. San Cristóbal and Santa Cruz islands. *Publication*: Campos, F. (1932).

WITTMER, H.—1934. Floreana Island. *Publication*: Richards (1941). *Collection*: Hancock Foundation, University of Southern California.

CONWAY, E. A.—1939. Floreana Island. *Publication*: Richards (1941). *Collection*: Hancock Foundation, University of Southern California.

FÖRSTER, JUAN—March, April, May, 1959. San Cristóbal, Floreana, and Santa Cruz islands. *Collection*: Zool. Sammlgn. Bayerischen Staates, München. *Publication*: Kernbach (1962).

SEKIGUCHI, KOICHI—December—January, 1959–1960. Floreana and San Cristóbal islands. *Publication*: Asahina (1961).

#### GALÁPAGOS EXPEDITIONS

**Voyage of the Beagle.** Charles Darwin. H.M.S. *Beagle*. September 16 to October 19, 1835. Chatham, Charles, Albemarle, and James islands. Re-

sults published: Butler, et al. 1877; Walker, 1848–1873, etc. *Insect collections*: British Museum (Natural History). *General account*: Darwin, C. 1839. Narrative of the surveying voyages of His Majesty's ships *Adventure* and *Beagle*, between the years 1826 and 1836, describing their examination of the southern shores of South America, and the *Beagle's* circumnavigation of the globe. London, Henry Colburn. Vol. III. Journal and Remarks. 1832–1836. pp. xiv + 629, maps. Darwin, C. 1845. Journal of researches into the natural history and geology of the countries visited during the voyage of H.M.S. *Beagle* round the world, under the command of Capt. FitzRoy, R.N. 2d ed. London, John Murray, pp. viii + 519, 12 figs.

**Kongliga Svenska Fregatten Eugenies Resa Omkring Jorden under befäl af C. A. Virgin, Åren 1851–3.** (Royal Swedish frigate *Eugenie* voyage around the world under the command of C. A. Virgin, years 1851–3). *Eugenie*. Dr. J. G. M. Kinberg. May 9, 1852 to May 20, 1852. Chatham, Indefatigable, Charles, James, Albemarle islands. *Results published*: Svenska Vetenskaps-academien, Stockholm. *Insect collections*: Naturhistoriska Riksmuseum, Stockholm. *General account*: Skogman, C. 1854–1855. *Fregatten Eugenies Resa Omkring Jorden Åren 1851–1853*, under befäl of C. A. Virgin. Stockholm, Adolf Bonnier, Förra Delen. pp. vi + 250; sednare delen, pp. v + 224, col. pls. maps, and text figs.

**"Agassiz Expedition."** Alexander Agassiz. Steamer *Hassler*. June 10, 1873 to June 20, 1873. Charles, Albemarle, James, Jervis, and Indefatigable islands. *Insect collections*: Museum of Comparative Zoology, Harvard. *General account*: Elizabeth Agassiz, "A cruise through the Galapagos." Atlantic Monthly, 1873 (May), pp. 579–584.

**Voyage of the Peterel.** Commander W. E. Cookson. H.M.S. *Peterel*. June 1875. Abingdon, Charles, and Albemarle islands. *Results published*: Proc. Zool. Soc. Lond. 1877. *General account*: Gunther, A. 1877. "Account of the zoological collection made during the visit of H.M.S. 'Peterel' to the Galapagos Islands." Proc. Zool. Soc. Lond., pp. 64–91.

**"Albatross" Expedition—1888.** (U. S. Fish Commission). Leslie A. Lee, Charles H. Townsend. Steamer *Albatross*. April 4 to 16, 1888. Chatham, Hood, Gardner, Albemarle, James, Duncan, Indefatigable, and Abingdon islands. *Results published*: Proc. U. S. National Museum, vol. XII, 1889. *Insect collections*: U. S. National Museum. *General account*: Howard, L. O. 1890. Scientific results of explorations by the U. S. Fish Commission Steamer *Albatross*. No. V. Annotated catalogue of the insects collected in 1887–88. Proc. U. S. National Museum, vol. 12, pp. 185–207.

**"Albatross" Expedition—1891.** (U. S. Fish Commission). Alexander Agassiz. Steamer *Albatross*. March 28–April 4, 1891. Chatham, Charles, Duncan,

James, Hood, and Albemarle islands. *Results published*: Bulletin Museum of Comparative Zoology, vol. 23, p. 25. *General account*: Agassiz, Alexander. 1892. Reports on the dredging operations off the west coast of Central America to the Galápagos to the west coast of Mexico, and in the Gulf of California in charge of Alexander Agassiz, carried on by the U. S. Fish Commission Steamer "Albatross," Lieut. Commander Z. L. Tanner, U.S.N., Commanding. II. General sketch of the expedition of the "Albatross," from February to May, 1891. Bull. Mus. Comp. The principal references for the Galápagos Islands are Butler (1877), Scudder (1893), McNeill (1901), Snodgrass (1902), Hebard (1920), and Caudell (1932). The treatments of *Sphingonotus* and *Schistocerca* by Snodgrass (1902) are followed rather than those of Hebard (who synonymized most subspecies) because Snodgrass was familiar with the insects in the field. Also, McNeill's (1901) treatment of *Liparoscelis* is adopted in preference to Hebard (1920). The list was reviewed for overall classification but not for completeness of Galápagos references by Grant (personal communication).

### Order MALLOPHAGA

The principal references to Galápagos species are Kellogg and Kuwana (1902), Kellogg (1906), and Ewing (1924). Dr. Theresa Clay has kindly reviewed the manuscript and checked or corrected many of the names after studying types and other specimens in the Kellogg collection. Mr. B. C. Nelson assisted Dr. Clay by locating Galápagos slides in the Kellogg collection at Berkeley and sending them to London. New synonymy and confirmed or corrected identifications by Dr. Clay are marked with an asterisk [\*]. The synonymy of *Actornithophilus milleri* is from Timmermann (1954), and generic placement of *Philopterus domesticus* and *P. insulicola* is by Carriker (1957). *Menopon rusticum*, Kellogg, 1896 (not Giebel, 1874), is a *Colpocephalum* (Clay, *in litt.*). For interpretation of the species of *Brueelia* see Hopkins (1951). Synonymy of *Nirmus curvilineatus* Kellogg & Kuwana is given by Clay (1958), that of *Lipeurus limitatus* (*Halipeurus*) by Edwards (1961), and that of *Docophorus peristictus* by Ward (1953).

The principal references to Galápagos Hemiptera-Heteroptera are by Stål (1859), Butler (1877), Heidemann (1901), Barber (1925, 1934), and Van Duzee (1933, 1937). Changes since Barber's comprehensive list (1934) are *Dallasiellus* (Froeschner, 1960), *Dicranocephalus* (Scudder, 1957), *Liorhyssus* and *Rhopalus* (Harris, 1943, Iowa State College Jour. Sci., vol. 17, pp. 197-204), *Pentacora sphacelata* (Drake, 1954), *Trigonotylus* (Carvalho and Wagner, 1957), *Polymerus nigritulus* and *Cyrtopeltis modesta* (Carvalho, 1957-1960), and *Halobates* (Herring, 1961). *Trichocorixa* (Hutchinson, 1931) was not identified to species. It is here recorded as *Trichocorixa reticulata* Guerin (Usinger).

The leading publications on Galápagos Homoptera are Walker (1851), Stål

(1859), Butler (1877), Morrison (1924), Osborn (1924), and Van Duzee (1933, 1937). Reclassification of the Walker and Butler species was by Muir (1919) and W. E. China (*in* Champion, 1924). The most recent placement of Fulgoridae is given in Metcalf (1943, 1954, 1958). Fennah (personal communication) placed *Issus varius* Walker in *Philatis*. Linnavuori (1959) is the authority for generic placement of *Deltoccephalus*, *Scaphytopius*, *Amplicephalus*, and *Exitianus*. W. E. China (personal communication) corrected the name *Jassus* of Van Duzee and Osborn. D. A. Young (personal communication) examined the Van Duzee types of Cicadellidae and his generic assignments have been followed. The modern classification of Coccidae is after Ferris (Atlas of Scale Insects of North America, Stanford University). H. L. McKenzie kindly reviewed the manuscript on Coccidae.

Order COLEOPTERA

The major contributors to our knowledge of the Galápagos Coleoptera have been G. R. Waterhouse (1845), Boheman (1859), C. Waterhouse (1877), Mutchler (1925, 1938), Blair (1928, 1933), and Van Dyke (1953). The present summary is based largely on Van Dyke, supplemented by descriptions or taxonomic treatment of Galápagos beetles appearing since 1953. Three of the most doubtful of the records reported by Blair (1933), *Doryphora guerina* Stål, *Diabrotica ventricosa* Jacoby, and *Physonota alutacea* Boheman, were excluded by Van Dyke and we have not restored them to the list. However, other dubious records remain and these are indicated with a question mark in front of the recorded Galápagos locality. R. F. Smith (personal communication) examined the type of *Diabrotica limbata* Waterhouse and found that it belongs to the genus *Acalymma*. This altered generic assignment is indicated below and the new combination should be credited to him.

## Order LEPIDOPTERA

Comprehensive works on Galápagos Lepidoptera are by Williams (1911) for butterflies and hawk moths and Schaus (1923) for other moths. Meyrick (1926) described additional Microlepidoptera, some of which have been revised by Clark (1958). Richards (1941) dealt with the Noctuidae collected on Hancock expeditions. Beebe (1923) gives field notes for his collections of Lepidoptera. Burns (1964) clarifies the Van Duzee record of *Erynnis* (Hesperiidae). Kernbach (1962) gives the most recent review of Sphingidae. E. G. Munroe (personal communication) has indicated generic placements in the Pyralidae, J. A. Powell in the Tortricidae, and R. J. Collins (personal communication) has checked bibliographic references throughout. In Washington, sections of the manuscript were reviewed as follows:

D. R. Davis (USNM)—Tortricidae (Olethreutinae), Tineidae; W. D. Duckworth (USNM)—Pyralidae (Phycitinae), Yponomeutidae; W. D. Field (USNM)—Pieridae, Nymphalidae, Danaidae, Lycaenidae, Hesperiidae, Springidae, Arctiidae; R. W. Hodges (USDA)—Pyralidae (Pyraustinae, Crambinae), Pterophoridae, Tortricidae (Tortricinae), Gelechiidae, Blastobasidae; E. L. Todd (USDA)—Noctuidae, Geometridae.

Order DIPTERA

Comprehensive reports on Galápagos Diptera may be found in Coquillett (1901), Johnson (1924), and Curran (1932, 1934). Authority for the synonymy of *Pseudolofersia diomedae* Coquillett with *Olfersia aenescens* Thomson, is Maa (1963), and for that of *Ceratopogon galapagensis* Coquillett with *Forcipomyia fuliginosa* Meigen, Wirth (1956). This section has been read by R. H. Foote, C. W. Sabrosky, G. C. Steyskal, Alan Stone, and W. W. Wirth.
